

Wave Breakers/ Security Barriers

Wardle Marine Services Ltd

The 'Enforcer' was designed as a marine floating barrier and can be configured depending on your requirements. When arranged in layers, it can be used as a wave attenuator, providing solutions for harbours, beaches and coves. Used in this way, it can reduce the energy of a wave by up to 90% without changing it's natural course. It is also the ideal solution to restrict water craft from entering a specific zone, and can be used for harbor, residential and military applications.

Module sizes

Dimension: 115cm x 50cm
Draft: 12.5cm
Freeboard: 102.5cm

Dimension: 80cm x 35cm
Draft: 15cm
Freeboard: 65cm

The modules are connected by two or more stainless steel cables housed inside an EPDM rubber sleeve. They are configured in single, double, four and five layering systems and can accommodate signage, navigation lights and razor wire, allowing for a whole variety of different conditions and uses.
