

# Drive on Docks

Wardle Marine Services Ltd

We offer two superb Drive on Docks suitable for craft ranging from Jet Ski's to vessels up to 10m in length

## Boatlift

Boatlifts are our top of the range model and have been designed to fully protect your 4m to 10m boat from marine conditions by lifting it fully out of the water. With a graduated entrance, bow support, and fully adjustable rollers and wheels, the Boatlift provides ease of launch and recovery and a reduction in maintenance. Electric or manual winches can also be attached to this product.

Boatlifts are built from central modules measuring 1m x 1m, a bow module containing the winch support, and the entrance section, which tapers down to the water level. These central modules are then surrounded by our modular cubes. One row of surrounding cubes will create a 2m wide dock, and two rows, a 3m width. These can be increased or decreased as you wish.

## Flexiports

Flexiports are similar to the Boatlift, but it is possible to leave out some mid sections, to ensure good drainage should the dock be over a muddy, or heavily sandy floor. Both Flexiport and Boatlift can easily be extended with our modular cubes should you require further access space, or even to match your growing PWC collection.

Hybrid models can be made should you require, for example, a Flexiport that needs the Boatlift bow enabling you to attach a winch. Maybe you'll need extra help for launch and recovery, and would prefer to have the wheels of the Boatlift entrance module.

Whatever your requirements, please ask. We are always happy to create bespoke pieces to ensure they fully meet, or exceed your needs and expectations.
